

iMobile Dictation

Before it can be used, speech-to-text must be enabled on each iMobile phone individually.

Turn Dictation On:

1. On the phone, launch the **Settings** app.
2. Tap **General**.
3. Tap **Keyboard**.
4. Toggle **Enable Dictation** to the **ON** position (green).
5. Wait about 5 minutes for the files to enable dictation to download.

Until the files are ready, this error will pop up when the mic icon is tapped.

Dictation Unavailable

An installed device management profile requires voice input to be processed on iPhone, but supporting data has not been downloaded yet.

Note

iMobile dictation is for use in the app only and should not be confused with Dragon dictation which is used within the EMR.
